Security Printer

# GRUPPO POZZONI

Pozzoni is the Italian biggest private security printer.

The company was founded in 1913 as a family-owned company that in over a century developed a combination of experience in security printing, research and highly skilled personnel.

Today banks, financial institutions, governments and commercial organizations consider Pozzoni a point of reference.

We can provide customised solutions based on our technical experience to meet your security concern.

We create the graphic studio of the product from the initial concept or we can cooperate with the customer design agency to add the security elements into the artwork (guilloche, numismatic and many others using specific security software).

We offer a wide range of security solutions, from watermark to printed features, from inks to holograms. These solutions include Intaglio Printing, silkscreen, flexo, laser "micro perforation" technology, full personalization of documents.

We can adapt to many logistical needs thanks to our secure storage (a private "caveau" built inside our site), distribution and pick and pack service.

We export our business in Europe, Africa, Middle East and worldwide, offering our experience, know-how and passion.

Our sales and technical teams and their representatives abroad will welcome the opportunity to provide you with answers to your requests.

**POZZONI Security Printer, a division of POZZONI S.p.A**

## SECURITY PRINTING Solutions

Below our solutions dedicated to Security Printing. We provide the whole life cycle of the document from the concept design to the secure storage and distribution.

Nr. 1 Software Creator Guilloche and Numismatic security designs

Nr. 2 Web fed Intaglio Printing Machines up to 4 colors

Nr. 5 Web fed Offset Printing Machines up to 10 colors

Nr. 5 Sheet fed Offset Printing Machines up to 5 colors

Nr. 2 Web fed Flexographic + 1 Web Fed Silk-Screen Machine

Nr. 2 Web fed Letterpress Numbering Machines

Nr. 3 Sheet fed Letterpress Numbering Machines

Nr. 2 Web fed Hologram Application Machines

Nr. 1 Fanfold Hologram Application Machine

Nr. 4 Engines of MICR black/white variable data printing

Nr. 3 Laser Micro Perforation Machines connected with variable data printing

Nr. 3 Bookbinding Machines

Nr. 2 Inserting System Machines

Nr. 3 Film Wrapping Machines

Nr. 1 Security Storage Vault (private caveau)

Passbooks

Ballot Papers, Tax Stamps

Security Label, Stickers

Lottery Coupons

Tickets Museum – Tickets Transport – Tickets Fair or for other events

Contract Carbonless Paper

## SECURITY PRINTING Features

### INTAGLIO PRINTING

We have 50 years experience in Intaglio Printing, a more tested security printing process that uses an engraved plate who is smeared with ink and then wiped clean. As a consequence the ink left in the recesses is printed on the paper through a heavy pressure. The result is that the ink remains in relief on the paper in a perfect register between colours. We use a specific security design software to create Numismatic and Guilloche patterns.

### LASER "MICRO PERFORATION"

This super innovative technology has been introduced to avoid any risk of counterfeiting due to the erasure of sensitive data on any security document

In order to get these results we use a thin laser beam which perforates the paper with small but visible points, which reproduce, in their arrangement, the numbers or letters that make up the data that have to be protected

The result is a number or a text clearly visible to the naked-eye that is not printed on the paper surface but it is an integral part of it. They can be printed on the front and on the back in one single pass
